7 Reproducibility and Extensibility

- **Every reply is archived.** `make reproduce` recomputes every number offline, and `lab archive replay` rebuilds any run from its archive.
- **Exact reruns need our own GPU.** On Modal with vLLM's batch-invariant kernels, a rerun repeated exactly (240 of 240); hosted APIs don't. None of the paper's runs used that setting.
- **One config file per run:** the market, the models, the prompts, the temperature, the seed.
- **To extend:** add a market (`market.kind`), a condition, a model alias or a stake sentence, then run a sweep with one command. A game costs cents.
- **Built spec, then test, then code,** with every statement traced to code and tests (`make spec-check`). MIT licence.

Code and Data

- **Code repository:** https://github.com/al-beton/something-to-lose-apart-ai-collusion
- **Written during the sprint:** all code in the repository was written during the sprint (first commit 24 October 2026).
- **Data:** every run's config, summary, manifest and turn log is committed under `runs/`; the replies behind them are in `archive/`. `make reproduce` checks every number in this paper.
